                                                                                                                                                                                                                                                  207
                                                                                                                                                                                                                                                                                                                                 synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and closed directionally into pTT3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this sibrary is CGCTACGGAC. The cell lines was provided by Dr James Martin of the cell lines was provided by Dr James Martin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /lab_host-"DH10B (Life Technologies)"
